Relevant Experience

Fullstack Developer • Clubers April 2023 - Present

- Developed and maintained a customer-facing mobile app covering restaurant discovery, menu browsing, order flow, map integration, order history, and referral/invitation codes.
- Built a waiter app for in-venue staff, handling QR code scanning, order creation, and payment processing — with support for in-app payments via PayPal and OpenPay gateways.
- Both apps communicate with a shared backend through REST services and Firebase for real-time data sync.
- Contributed to a back-office web panel built in React, used to manage restaurant data, configurations, and user memberships.
- Led the migration of both apps from Xamarin.Forms — adopting Flutter for the cross-platform customer app and Kotlin/Jetpack Compose for the Android-only waiter app — improving performance and maintainability.

Tech lead (Mobile) • TCA Software solutions February 2020 - March 2023

- Served as the technical point of contact in client meetings, gathering requirements and translating them into actionable development tasks.
- Supported the team through task definition, technical guidance, and hands-on development across all three projects.
- Integrated Firebase across projects for real-time data, push notifications, and analytics.

Fullstack Developer • Minerva ideas September 2019 - January 2020

- Developed and maintained a multi-tenant SaaS platform designed for medical practices, supporting specialties including general medicine, gynecology, and pediatrics.
- Built and extended core features: a virtual appointment agenda, a prescription manager allowing each doctor to generate and customise their own prescriptions, and a configurable medical history system adaptable to different specialties.
- Collaborated within a development team, assigning tasks and organising sprint planning to keep delivery on track.

Fullstack Developer • Rivka Development June 2018 - August 2019

- Worked as a developer across multiple client projects, delivering both web platforms and mobile applications using a range of technologies.
- Clicfans — Web platform for building landing pages with an automated email funnel for lead capture and nurturing.
- Lucy — React Native mobile app to control a smart lamp via Bluetooth Low Energy (BLE), featuring alarm scheduling and speaker control.
- Employee Reporter — Internal workforce app where field workers could log hours, report tasks and issues, and generate PDF reports; included an approval workflow and automated email notifications for supervisors.

Skills

Programming languages:

Kotlin, C#, Dart, Typescript, Javascript.

Libraries & frameworks:

React, ASP.NET, RESTful APIs, Flutter, tailwind, Jetpack Compose, Xamarin.forms.

Databases:

SQLServer, MySQL, NoSql (Firestore).

Tools:

Git, Github, CI/CD, Digital ocean, AWS, Copilot.

Education

Universidad de Sonora (2019)

Information System Engineer
